

SPEIDEL 50/50

Unique cost effective and innovative

If you are interested in working as an agent or you need more details why not contact our UK office right now.

And don't forget this too -
A few more benefits

- The 50 / 50 can be used as a sustainable flood water management measure.
- The 50 / 50 slows the release of excess flood water to combined drain or water course.
- The 50 / 50 means no need for additional post tank flood water attenuation.
- No more hose pipe ban worries.
Natural rain water supply all year round.
- Easy to install and maintain with no need for expensive concrete back fill.
- Can assist with SuDS's adoption schemes (50:50 is a sustainable drainage system)

Optional extras :

- High water valve for installation in high water table situations
- Linking kits: DN50, DN100 and DN150
- Internal calming inlet
- High level over flow
- Rainwater filtration kit
- Water management equipment to suit

How to reduce mains water use by 50 %, and prevent localised flooding
