

Submersible pressure pump Multi X

Stainless steel multistage submersible pump with an integrated pump control

Applications

- Domestic water supply
- Garden irrigation
- Rainwater supply

Product advantages

- Integrated pump control
- Integrated dry run protection
- Integrated pressure vessel 0,16L
- Compact design
- Medium-cooled motor
- Corrosion-resistant
- Easy installation
- Maintenance free
- Stainless steel body (AISI 304)
- Quiet running

Submersible pressure pumps Multi X

Product description

The Multi X is a multistage, medium-cooled submersible pump for garden and domestic water supply. It can be used to reliably supply rain water from a rainwater storage tank for toilets, washing machines and garden watering. The intelligent pump controller recognizes if the pump is running dry. In this event the pump will try to start again, if there is still no water available the pump turns off. This all guarantees safe operation and high degree of efficiency. The electronics also protects the pump against defects in the non-return valve that generally occur due to dirt or sand incrustations (max. 0,15%).

Brief technical description

- Optional lateral suction connection for connection with a floating extraction device
- Multistage submersible pump with a hydraulic section under the motor which is medium-cooled
- Heat and current protection switch incorporated
- Integrated flow switch with an automatic electrical switch on/off function
- The pressure and flow monitoring enables safe shutdown if the pump runs dry
- Plastic and synthetic impellers
- Suitable for continuous operation
